DETAILED ACTION

1. Applicant's Pre-Amendment filed March 17, 2004 has been entered. The specification has been amended. Claims 1 – 16 and 18 – 20 have been canceled.

2. Claim 17 is presented for the examination.

Allowable Subject Matter

3. Claim 17 is allowed.

4. The following is an examiner's statement of reasons for allowance:

The prior arts teach a semiconductor memory device comprising:

a memory cell array including a plurality of memory cell blocks each having a plurality of row decoders with a plurality of row lines, a plurality of plate lines driver with a plurality of plate lines, each of said memory cell blocks includes a plurality of series-connected memory cells and at least one selection transistor serially connected to at least one end of the series-connected portion, one end of each of said memory cell blocks is coupled to a corresponding one of a bit line, the other end is connected to a corresponding one of the plate lines, a gate terminal of each cell transistor is connected to a corresponding one of the sub-word lines, the memory cell includes the cell transistor and a ferroelectric capacitor connected between source and drain terminals of the cell transistor.

The prior arts however did not teach the memory cell array above, further including a plurality of sub-arrays, a plurality of sub-row decoders provided between the plurality of respective sub-arrays, a main row decoder disposed on one-end side of the plurality of sub-arrays in a sub-word line direction, and a plurality of main-block selecting lines for respectively supplying outputs of said main row decoder to said sub-row decoders;

wherein the plurality of sub-arrays each include said plurality of sub-word lines, a plurality of bit lines, a plurality of plate lines and a plurality of memory cell blocks, the plurality of sub-arrays are arranged in the sub-word line direction, a metal interconnection used for forming the plate lines and a metal interconnection used for forming the main-block selecting lines are formed by metal interconnection layers at the same level, and a metal interconnection used for parallel connection of the cell transistor and the ferroelectric capacitor is formed by a metal interconnection layer formed at the same level as the plate lines and the main-block selecting lines.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2818
